GENE-UP® PRO HOP LATENT VIROID

Punch. Know. Grow.

PIONEERING DIAGNOSTICS

Increase Yield with Overall Plant Quality

Hop Latent Viroid (HLVd) can wreak havoc on cultivation and profitability, but it doesn't have to be this way. Knowing if HLVd is present early decreases the possibility of introducing infected plants and clones into a healthy cultivation and helps prevent risks of spreading throughout your operations. This results in an increased yield and overall plant quality.

Hop Latent Viroid testing can be done early and with simple, reliable testing methods with GENE-UP® PRO HOP LATENT VIROID (HLVd). This test delivers rapid results in a simple and reproducible process to help protect the health of your cultivation and your profits through the identification of plants infected with HLVd. Punch. Know. Grow. with PRO HLVd in Cultivation sites, In-House Labs, and Compliance Labs.

BENEFITS OF THE GENE-UP PRO HLVd WORKFLOW

- SIMPLE** 4 easy steps from sample to results
- EFFICIENT** Run as little as 1 sample or up to 96 at one time
- PROFITABLE** Streamlined workflows to impact lab optimization
- RELIABLE** Results backed by science with no interpretation needed
- RAPID** 6 minute sample prep from leaf punch to PCR
- SUPPORTED** Hand-in-hand partnership with bioMérieux scientific expertise

ORDERING INFORMATION

IS1104	GENE-UP PRO HOP LATENT VIROID (HLVd) Kit	24 assays/kit
414057	GENE-UP Lysis Kit	192 tests/kit
IS2676	Leaf Punch Kit	1 box/25 punches
4704266	GENE-UP PCR System Configuration	1
